1. System requirements

Every JavaScript and CSS supporting browser is able to access the web interface.

The web interface is tested under Windows 7/8/10 and internet browsers in their latest version at the time of delivery (MS Internet Explorer, Mozilla Firefox and Google Chrome).

The FTP server is only supported by Windows own official FTP clients (command line, Internet Explorer or Windows Explorer) as well as under Linux FTP client (command line). Browser implementations are not working.

2. General Note

Close all pages of system configuration before restarting the central unit! Restarting makes buffered information in the browser obsolete and saving afterward leads to unwanted side effects.

3. Troubleshooting

Avoid opening several web pages of one system at the same time. It is not possible to configure two different parameters (e.g. final circuits) parallel.

For FTP connection to the multiControl, program the IP address of the client as "gateway" in the network configuration of the multiControl!

[Menue → Configuration → Administration → Network].

Increasing write accesses to the file system affects negatively to the access time and overall performance of the multiControl.

4. Administration Area

Login

At the change from the user area to the administration area (through the link at the administration page) a login via browser is necessary. The login data are:

username: user

password: password is variable*

* Please get in contact with your distributor.

5. System

system no.	system name	location	contact person/phone	master/slave
12378	LPS			master ▾
	9 circuits			

On this page is the configuration of the fundamental system parameters.

Input fields:

- System name
- Location (3 rows)
- Contact person
- Phone
- System type [master, the slave with or without battery]
- Amount of final circuits (only displayed, the number of final circuit results from detected electric circuit modules)

For input fields, the following applies:

- For each input field, the entries transfer consecutively to the system after escaping the input field (via the TAB key or clicking into another input field).
- Only after pressing the „Save system“-button all system configurations are saved.
- Reloading pages before saving will result in the loss of all changes.
- Attention when using special characters and vowel mutation

It is possible to initiate the following actions:

Function test:

- Triggering a function test.
- Colored quadrants visualize the test progress.
- A link to the test results appears at the end of the test.

Capacity test:

- Triggering a capacity test.
- Colored quadrants visualize the test progress.
- A link to the test results appears at the end of the test.

Save system:

- The "save system" button saves the changed settings in the system configuration.

There are more links to administrative pages:

- Substation
- Subdistribution
- All circuits
- Circuits
- Tests
- Maps
- Timer
- SAM
- IOM
- E-Mail
- Options
- Battery monitoring

6. Subsystems

On this page, the configuration of the monitored substations takes place.

Input fields:

- inter-system communication: off, on
- IP address of the monitored substations
- Connection to subsystem: monitor, do not monitor
- Cumulative error: forward, do not forward

Actions:

- save system
- reload

7. Subdistribution

Sicherheitsbeleuchtung
Emergency lighting

overview test results maps configuration administration

multiControl plus : Test MC 12377 > administration > subdistribution

UV 1: (TSC-UV HW:2 SW:3)

position	UV 01
local mains input U_L	activated ▾
CCIF 1.1	MB UV-01 KK 1
CCIF 1.2	MB UV-01 KK 2
CCIF 1.3	MB UV-01 KK 3
CCIF 1.4	MB UV-01 KK 4

UV 2: (UVC1 HW:9 SW:5)

position	UV 02
----------	-------

save reload

On this page, the configuration of subdistributions takes place.

Input fields:

UV 1 (only MCV-E):

- Position Plain text which appears in case of failure in the LC-display of the main system
- Local mains input U_L : off, activated
- CCIF 1.1 – 1.4 Plain text which appears in case of an open quiescent current loop in the LC-display of the main system

UV 2 (only conventional MCV)

- Position Plain text which appears in case of failure in the LC-display of the main system

Actions:

- save
- reload

8. Final circuits

The screenshot shows the 'Emergency lighting' configuration page. At the top, there are navigation links: overview, test results, maps, and administration. Below the navigation, a sub-link indicates the current path: miniControl plus : LPS > administration > circuits.

Circuit Parameters: (DCM 32 HW.0 SW.0)

circuit number	number of lamps	position	operating mode
3	20		maintained light

Stop Delay: supply duration

stop delay	supply duration	circuit monitoring	current reference value
1 min	∞	current window: off	0 W reset

Circuit SAM:

	SAM / MC-LM	input	operating mode
1	-	-	-
2	-	-	-
3	-	-	-
4	-	-	-
5	-	-	-
6	-	-	-
7	-	-	-
8	-	-	-

Lamps:

lamp no.	type	illuminant	position	ordering no.	lamp symbol	map
1	other	other			maintained light	
2	other	other			maintained light	
3	other	other			maintained light	

On this page, configuring of the operational parameter of a respective final circuit and the connected luminaires takes place.

Please observe the following:

- Switching to the settings of the next final circuit without saving leads to the loss of the prior settings
- After changing the number of luminaires, saving the settings and reloading the page afterward is necessary before the configuration of the changed luminaires is possible

Input fields (circuit parameters):

- circuit: Shows the actual configured final circuit and allows to switch among the other final circuits
- circuit number: If additional or different circuit numbering is required, these can be configured/adapted via the circuit number. The adapted circuit number is additionally shown in the test results
- number of lamps: Set the number of lamps in the final circuit
- position: Allocate a plaintext of the position of the circuit (e.g., 1st-floor, building 1)
- operating mode: Set the operating mode of the final circuit (maintained light (at DCM12E - ELS), standby light or off)
- stop delay: manual switch back, 1min, 2min, ..., 15min
- supply duration: ∞, 3min, 4min, ..., 8h
- circuit monitoring: current window: off, 5%, 10%, 20%, 50%
- current reference value: reset button (the reset needs a save of the system)
- circuit SAM: -, 1, ..., 16
- input: -, 1, ..., 8; MC-LM; TLS1, TLS2
- operating mode: maintained light, non-maintained light, switchable light

Input fields lamps:

- type
- illuminant
- position
- ordering number
- lamp symbol: maintained light, non-maintained, maintained (CM*), non-maintained (CM*), off
- map: Selection of the stored building plan, where the luminaires appear See visualization

*CM: circuit monitoring

Actions:

- save circuit
- reload circuit (leads to the loss of all unsaved configurations)

9. Tests

The screenshot shows the 'Sicherheitsbeleuchtung Emergency lighting' interface. In the 'tests' section, there are two main tables:

function tests		
interval	time	Warm-up luminaires
Sunday, after 21 days	12:00 hh:mm	5 minutes
		total current
		current window
total current monitoring	-9.5 A	off

next test: 2019-03-10, 12:00:00.

capacity tests		
date	time	test duration (hours)
manual	manual	15min
01.01	00:00 hh:mm	off
01.04	00:00 hh:mm	off
01.07	00:00 hh:mm	off
01.10	00:00 hh:mm	off

Under the menu "tests" is the configuration of the test interval for the automatic function test. It is possible to program the start time of four capacity tests including their test duration time.

Note: Observe the applicable regulations on site, whether an automatic executed capacity test is permitted.

Input fields function test:

- Interval: daily, every other day, weekly, every two weeks, every three weeks, every four weeks, each with weekday
- Time
- Total current monitoring*
- Current windows: off, ±5%, ±10%, ±20%, ±50%
- Warm-up luminaires: off, 5min, 30min

*unnecessary at circuit monitoring or single luminaire monitoring

Four input fields capacity test:

- Date
- Time
- Test duration time (hours): deactivated, 5 min, 15 min, 30 min, 45 min, 1 h, 75 min, 90 min, 105 min, 2h, 135 min, 150 min, 165 min, 3h, 4h, 5h, 6h, 7h, 8h

Actions:

- save circuit
- reload circuit

10. Maps

floorplan	file type	name
h	.png	Building view
m00	.png	ground floor A
m01	.png	ground floor B
m02	.png	first floor A
m03	.png	first floor B

The menu "maps" shows an overview of all via FTP uploaded maps in the file system. Possible graphics formats are ".png, .jpg, .svg, or .gif". Each file must not exceed a maximum file size of 150kb. It is possible to discard a maximum of 10 maps in a proper format. Observe the following name scheme: m00.xxx, m01.xxx, ..., m10.xxx. "xxx" stands for the suffix of the used graphics format (.png, .jpg, .svg, or .gif).

Every map can be assigned a name, which appears in the pick list in the final-circuit configuration of each luminaire. A graphic with the name "h.xxx" appears on the right side of this menu (e.g. an exterior view of the building).

Note: Do not forget to save after every change, use therefore the "save" button. Even a save in the menu "administration > maps" is necessary. Disregarding will result in loss of changes.

Input fields:

- Every map in the file system can be assigned a name, which will be saved automatically

Actions:

- Specify how many maps are in the file system by using the button "number of floorplans"
- Apply the file type to each map

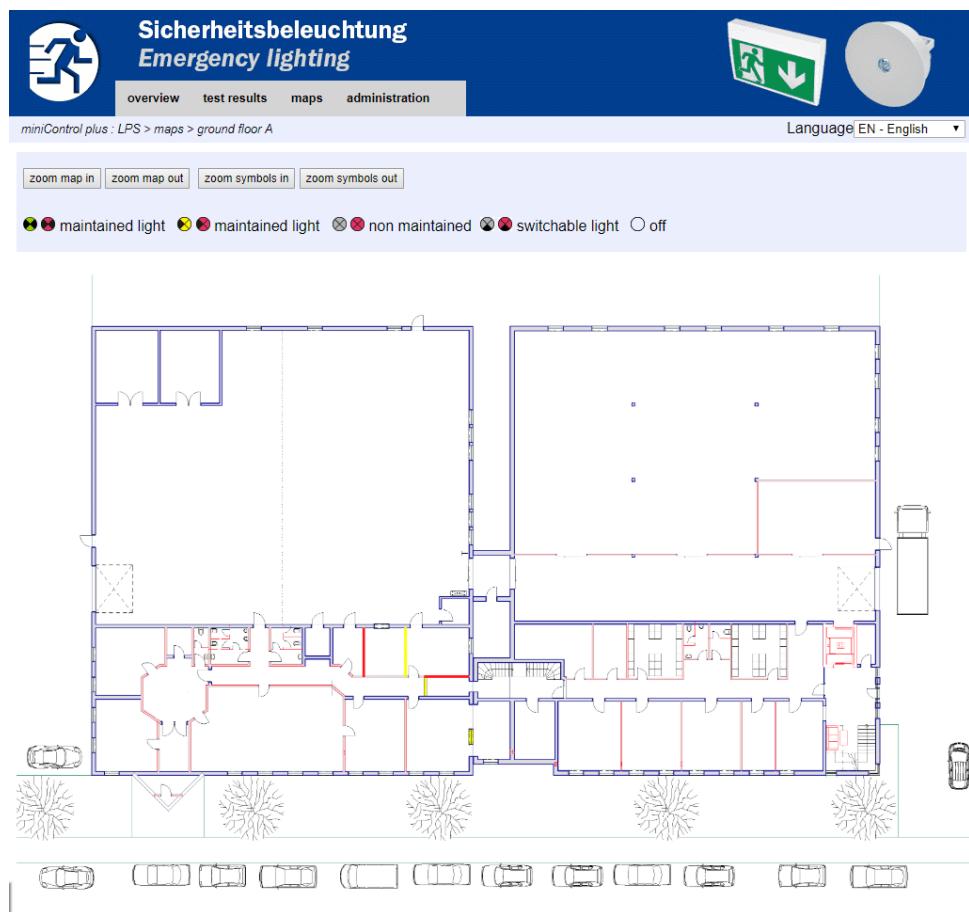

Links:

- The link "internal URL for maps" leads to the FTP-server of the multiControl plus. Once the Internet Explorer is open, click on View and then on "open FTP site in file explorer" to open the FTP-directory in the Windows Explorer. Files are via Drag&Drop exchangeable. After new files are copied in the file system it is necessary to press "reload" to read in the new files before it is possible to edit them. For every map on the file system, a link, which leads to the visualization, is created.

Note: Write graphics formats in lower cases!

m00.gif ✓
m00.GIF X

11. Visualization

Via Drag&Drop the luminaires can be placed on the respective map (selection in the circuit configuration).

Actions:

- zoom map in
- zoom map out
- zoom symbols in
- zoom symbols out
- save

12. Timer

timer	state	circuits		time		weekday		date	
		from	until	on	off	from	until	from	until
1	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
2	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12

4	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
5	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
6	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
7	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
8	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
9	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
10	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
11	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12
12	inactive ▾	(K1) 1 ▾	(K13) 13 ▾	00:00	00:00	Monday ▾	Sunday ▾	01.01	31.12

Up to 32 timers are programmable.

32x input fields [Timer]:

- timer control (all timers) active/inactive
- state [active, inactive]
- circuits from [selection field final circuit]
- circuits until [selection field final circuit]
- time on (time when the circuits switches on)
- time off (time when the circuits switches off)
- weekday from [selection field weekday]
- weekday until [selection field weekday]
- date from
- date until

Actions:

- save
- reload

13. SAM / MC-LM

input	text	function
E1	SAM 1 E1	lamp switching
E2	SAM 1 E2	lamp switching
E3	SAM 1 E3	lamp switching
E4	SAM 1 E4	lamp switching
E5	SAM 1 E5	lamp switching
E6	SAM 1 E6	lamp switching
E7	SAM 1 E7	lamp switching
E8	SAM 1 E8	lamp switching

Up to 16 switch scanning modules (SAM/MC-LM) are programmable:

Input fields:

- SAM No. [1, ..., 16] Selection of the respective SAM module
- 8 inputs fields, with up to 21 characters, for plain text for all switching inputs of each module (MC-LM only one switching input/only mains monitoring)

Actions:

- save
- reload

14. IOM

input	message	action
IOM 1 E1	BAS	-
E2	internal fan	-
E3	external fan	-
E4	function test	-

Up to 5 IO-modules (IOM) are programmable:

Actions:

E2/E3

- message on E = 0
 - message and fault on E = 0
 - message on E = 1
 - message and fault on E = 1
 - fan failure K6 on E = 0
 - fan failure K6 on E = 1
 - fan failure on E = 0
 - fan failure on E = 1
- through IOM1 K6 switched fan
- Permanent fan

E4

- run function test
- shutdown circuits
- -

myControl plus

- E1 -/BAS/EPO (emergency power off)
- E2 message on E = 0
message and fault on E = 0
- E3 -
- E4 -

15. User area

15.1.Homepage / compact overview of the system with substations

http://IP_ADDRESS_MULTICONTROL

The screenshot shows the homepage of the multiControl web interface. At the top, there's a navigation bar with icons for emergency lighting and a search bar. Below the bar, a message says "Click on a lamp symbol next to a system to show a detailed status information for this system". A legend indicates: ● o.k., ○ not available, ✘ error. The main area displays a table with columns: system, system name, circuit, and state. One row is shown: master, LPS, 9 circuits, operational.

The homepage of the web interface gives an overview of the state of the system and all substations. Monitoring of the substations requires that the IP addresses of these are entered in the respective page of configuration.

In the navigation bar, the language of the web interface is changeable.

The following languages are available:

- CZ - Cesky
- DE - Deutsch
- DK - Danks
- EN - English
- FR - Francais
- HR - Hrvatski
- NO - Norsk
- PL - Polski
- SE - Svenska
- SK - Slovencina
- RU - Russian

The change of the language only affects the web interface. The language of the menus and options at the LC-display stays unchanged, but these are changeable directly via the LC-display. Through the link "detailed list" or state, a detailed overview of the system and the substations is available. The link "compact list" shows up the short overview.

15.2.Detailed overview of the system and the substations

17. Customer support

17.1.Service address

The screenshot shows a web-based control panel for emergency lighting systems. At the top, there's a navigation bar with icons for a person walking, a document, and a gear, followed by the text "Sicherheitsbeleuchtung" and "Emergency lighting". Below the navigation bar, there are tabs for "overview", "test results", "maps", and "administration". A sub-navigation bar below the main tabs shows the path: "miniControl plus : LPS > administration > service address". On the right side of the header, there are icons for a fire exit sign and a roll-up door. The main content area is titled "service address" and contains a table with six rows, each with a number (1. through 6.) and a corresponding input field. Below the table is a "save" button. The URL in the browser's address bar is http://IP_ADDRESS_MULTICONTROL/admin/service.html.

http://IP_ADDRESS_MULTICONTROL/admin/service.html

It is possible to change the service address, which is linked and displayed in the system overview.
